

Get Started with Panorays for Evaluating the Security Posture of Your Subsidiaries

Enterprise companies can sometimes own hundreds of subsidiaries that operate in different locations and time zones. If a data breach occurs at a subsidiary, the parent company is affected as well. Therefore, it's important to effectively assess and monitor the cyber posture of your subsidiaries.

For example, in 2017, PayPal was breached by a subsidiary that it had recently acquired, TIO Networks. The private information of an estimated 1.6 million customers was compromised as a result.

Panorays provides you with the ability to quickly and effectively evaluate your subsidiaries with:

Inside-Out and Outside-In View

1. 360-Degree Ratings

Panorays' ratings are comprised of an outside-in view, along with an inside-out view, giving companies a complete picture of their subsidiaries' security posture. It performs a non-invasive outside-in assessment of digital assets, much like the way a hacker would perform reconnaissance on a possible target. At the same time, Panorays manages automated security assessments that consider whether your internal company policy aligns with your subsidiaries.

Adherence to Parent Company Policy

2. Automated Questionnaires

Often, branches must adhere to the internal security policies of the parent company. Panorays makes it easy to check that subsidiary policies align with the parent company policies, and will work with subsidiaries to strengthen cyber posture if the policies do not align. With Panorays' automated security assessments, companies can easily customize questionnaires according to their policies and needs. Companies receive rapid responses from subsidiaries and can easily verify when inquiries have been completed and cyber gaps have been remediated. In addition, they can adjust question scoring according to internal policies and standards.

3. Compliance

Data privacy laws such as GDPR and CCPA demand that you take responsibility for your subsidiaries' compliance. With Panorays' customizable automated security assessments, parent companies can easily and quickly evaluate their subsidiaries' regulatory readiness and determine what steps need to be taken for them to fully comply.

4. Engagement

With Panorays, parent companies can easily engage with subsidiaries to close cyber gaps. All interaction takes place on the same platform. Not only does this mean that security assessments are completed quickly, it also means that subsidiaries can view assessment results and improve their cyber posture. Both companies and their subsidiaries can easily dispute or validate findings and report progress mitigating cyber gaps. With this level of engagement, there are no more false positives, no more unclear answers and no more misunderstandings.

5. Continuous Monitoring

The cyber world is constantly changing. New vulnerabilities are introduced constantly, and companies routinely add new solutions and software that could affect their cyber posture. For this reason, Panorays continuously monitors your subsidiaries and sends you live alerts about any changes to their security.

Panorays automates third-party security management. The platform enables companies to easily view, manage and engage on the security posture of their third parties, vendors, suppliers and business partners. With the Panorays platform, companies dramatically shorten their third-party security evaluation process and gain continuous visibility while ensuring compliance to regulations such as GDPR and NY DFS. Panorays is a SaaS-based platform, with no installation needed.
